                                                                                                The present sequence is given in a specification relating to a rat paragralisate de GML specific alphal-Zfucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising Fucalphal-Zgalbetal-3GalNac, a glycolipid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-Zgalbetal-3GalNac. The method involves contacting alphal-Zfucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein or useful for synthesis of fucosyl-GML by contacting the protein with GDP-fucose and ganglioside GML1. The obtained glycoproteins,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                     (alphal-2Fucr) enzyme and its corresponding nucleic acid. This nucleic acid is specific for a carbohydrate moiety found in ganglioside GM1, a terminal galactose betal-3N-acetylgalactosamine (Galbetal-3GalNac) saccharide. Alphal-2Fucr DNA is useful for producing rat alphal-2Fucr protein by recombinant techniques. Alphal-2Fucr DNA is useful for the proparative synthesis of fucosyl containing glycolipids, glycolipids, glycolipids, glycolipids, glycolipids, glycolipids, alphal-2Fucr DNA is useful for detecting oncogenic transformation which involves assaying for changes in expression of alphal-2Fucr Since alphal-2Fucr is activated in cell transformation, antisense sequences derived from alphal-2Fucr DNA are useful for inhibiting, suppressing antisense therapy. The present sequence is rat hepatoma H35 cell alphal-2Fucr catalytic domain encoding DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AATGGAGAGCTGCGGGGCATGTTCACGATCAATTCCATTGGCCGGCTGGGGAACCAGATG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is given in a specification relating to a rat ganglioside GM_1-specific alphal-2fucosyltransferase protein. The protein or its callular fraction is useful for synthesis of a molecule comprising Fucalphal-2Galbetal-3GalNac, a glycolpid, glycoprotein, glycolpoprotein or a free oligosaccharide comprising Fucalphal-2Galbetal-3GalNac. The method involves contacting alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolpid, glycoprotein in glycolprotein or oligosaccharide having a terminal Galbetal-3GalNac group. It is also useful for synthesis of fucosyl-GM_1 by contacting the protein with
780

This nucleic acid is specific for a carbohydrate moiety found in ganglioside GM1 at terminal galactose betal-3N-acetylgalactosamine (albetal-3GalNAC) saccharide. Alphal-2FucT DNA is useful for producing rat alphal-2FucT protein by recombinant techniques. Alphal-2FucT DNA is useful for producing rate alphal-2FucT properative synthesis of fucesyl containing glycolipids, glycoproteins, glycolipoproteins and oligosaccharide, and for preparing fucesyl-GM1. Alphal-2FucT DNA is useful for detecting oncogenic transformation which involves assaying for changes in expression of alphal-2 FucT. Since alphal-2FucT is activated in cell transformation, antisense sequences derived from alphal-2FucT DNA are useful for inhibiting, suppressing or treating cancer. Alphal-2FucT DNA is useful in gene therapy and antisense therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rat hepatoma H35 cell alphal-2fucosyltransferase, useful for producing GMI-specific alphal-2fucosyltransferase enzyme by recombinant techniques and for detecting oncogenic transformation of test tissues .

It was isolated from a pig liver genomic library using full-length human for momology with human FOTI. Introduction of glycosyltransferase nucleic acid, such as porcine Se nucleic acid, into a tissue results in reduced expression of unwanted carbohydrate epitopes on the tissue, especially porcine heart, liver, kidney or pancreas, rendering it more suitable for transplantation, i.e. less immunogenic and of increased immunological acceptability. A immunologically acceptable for a recipient species involves reducing levels of carbohydrate on the donor cell that causes it to be ceconised as non-self by the recipient species involves reducing for a glycosyltransferase such as Se to be expressed in the cell: Expression units, such as retroviral packaging or producer cells, containing Se nucleic acids can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes pig secretor used in an example of the present invention. The present invention describes nucleic acids (NA) encoding a chimeric glycosyltransferase. The NAs comprise a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the chimeric enzyme is located in an area of the cell where it is able to compete for substrate with a second GT, resulting in reduced levels of a product from the second GT. The NAs can be used to produce cells and organs with desired glycosylation patterns. Products and methods of the present invention can be used to reduce the levels of undesiredally and the second GT, and the levels of undesiredally considered the levels of undesiredally considered the levels of undesirable epitopes in cells, tissues or organs which may be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ITCAGGATCAGCCTCCCGGTGTTACACAGGGGCACGGCCAAAAAAAGATCCCATGGCAGAAT

                                                                                                                                        This sequence encodes the human Sec2 protein of the invention. The DNA encodes a alpha(1,2) fucosyltransferase and is the Secretor alpha(1,2)fucosyltransferase locus, that cross hybridises with the H blood group alpha(1,2)fucosyltransferase gene. The DNA is useful for producing a recombinant human GDP-L-fucose.Deta-D-galactoside 2-alpha-Lincosyltransferase (FUT2) which can be used for genotyping an individual as a secretor or nonsecretor as it is known that nonsecretors homozygous for a mutant allele of the FUT2 gene that has a stop codon in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TCGTGGTTACAAGCAACGGTATGGCCTGGTGCCGGGAGAACATTAATGCTTCCCGAGGAG

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABLG1664 comprises a sequence (S) selected from 847 sequences (given in ABLG1664 comprises a sequence (G) activity, and can be used fanti-neoplastic activity. (I) has cytostatic comprises in indicative of anti-neoplastic agent, and can be used for producing a product which can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a crivity and can properties of the agent. MI can be used in the structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, onesophageal, ovarian, kidney, prostate or panceatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating dottal cancer, infiltrating dottal cancer, squamous cell carcinoma, neuroendocrine controlled.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        787
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        247

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          406
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarchnoma, carchnoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (s) selected from 847 sequences (given in ABLE1664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          188 ACGCCACACTCTTTGCACTGGCCAGGATGAACGGACGGCTTGCGTTCATCCCCGCATCCA

The present invention describes a method (M1) for screening for an action action action describes a method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in capression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABLG1664 comprises a sequence (S) selected from 8447 sequences (given in ABLG1664 comprises in sequence (S) selected from 8447 sequences (given in ABLG1664 comprises in action or is at least 95% identical to (S), where a change in cappression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in que therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producin a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the creatment of cancer such as colon, breast, stomach, lung, thyroid, adenocarcinoma, varian, xidney, prostate or pancreatic cancer, adenocarcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating ductal cancer, squamous cell carcinoma, neuroendocrine infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Horrigan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Endress G,

The present invention describes nucleic acids (NA) encoding a chimaric glycosyltransferase. The NAs comprise a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the chimaric enzyme is located in an area of the cell where it is able to compete for substrate with a second GT, resulting in reduced levels of a product from the second GT. The NAs can be used to produce cells and organs with desired glycosylation patterns. Products and methods of the epitopes in cells, tissues or organs which may be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             354
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         375

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               849
                                                                                                                                                               The present sequence encodes swine alpha(1,2) fucosyltransferase (FUT1). The specification describes methods relating to Escherichia coli-resistant swine. One of the methods for identifying a swine resistant to E. coli-associated intestinal disorders, comprises determining whether the base at 307 of alpha(1,2) fucosyltransferasel gene (FUT1) is adenine (sic), in which case the swine are resistant. I porcine FUT1 polymorphisms can be used to develop drugs for the treatment of swine having E. coli-associated disease. The methods can also be used in preeding programmes to identify swine with resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                   543 GAGCAGATCCCCAGCGAGCTTCACCTGCACCACCTTCGGCAAGAGGCCCAGGGGGTA

and the assay itself is used as a basis for a kit, applied to swine of any age, in detecting polymorphisms associated with E. coli F18 receptors. The polymorphisms are useful in developing drugs to treat swine with E. coli-related diseases. However, a mutated form of the porchine FUTI gene may interfere with the normal enzyme and prevent it from producing the intestinal receptor for F18 The detection of polymorphic markers in the method disclosed enables the detection and treatment of E. coli-related intestinal diseases in swine, where there

The method comprises determining whether a genetic polymorphism associated with resistance to colonisation is present in a swine sample, and then inferring that the swine is resistant if it is homozygous for the polymorphism. The method uses the swine alpha-1.2-fucosyltransferase (FUT1) polymorphism. The present sequence encodes swine FUT1. The method enables the breeding of swine that are resistant to E. coli-related diseases. This method comprises breeding swine that have a genetic polymorphism in the FUT1 gene. More particularly, the identification method identifies swine that are resistant to E. coli-related intestinal disorders if, in a sample taken, the only nitrogen base at residue 307 in the FUT1 gene is adenine. Larger amplified fragments from the assay can be used for FFLP analysis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the nucleotide sequence of the pig FUTI gene encoding alpha1-2 fucosyltransferase (see AAY9302). A polymorphism at position 307 of the coding region is associated with susceptibility to F18 Escherichia coli colonization; pigs homozygous for adenine at position 307 are resistant to colonization, while heterozygous animals homozygous for quanime at position 307 are resistant to colonization. A claimed method for improving weight costionization and feeding these animals high levels of plant-based protein concentrate. A claimed method for preventing F18 E coli colonization in swine, especially swine that are genetically susceptible to F18 E. coli colonization in swine, especially swine that are genetically susceptible to F18 E. coli colonization in swine, replacing some or all of the plant-based proteins in the diet with using londer special susceptible for first swine that have E. coli colonization in swine, useful for developing drugs to treat swine that have E. coli associated disease. The polymorphism in the FUTI gene is also associated disease. The polymorphism can be detected using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Improving weight gain in swine using swine genetically resistant
Escherichia coli and feeding swine high levels of plant based protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   39.7%; Score 423.8; DB 21; Length 1269; llarity 69.6%; Pred. This sequence represents the swine alpha (1,2) fucosyltransferase (FUT1) gene. A FUT1 gene in which there is a base other than adenine at position 307, may be used for improving weight gain in swine that are genetically susceptible to F18 Escherichia coli. The weight gain may be activated by feeding a diet of at least 40% animal based proteins. The feeding method is used to control F18 E. coli associated intestinal disease in swine. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence 7, Al sequence 7, Al sequence 7, Al sequence 1, Al sequence 1, Al sequence 1, Al sequence 3, Al sequence 4, Al sequence 5, Al sequen

Patent No. 6329170

GENERAL INFORMATION:

APPLICANT: Exic H. Holmes et al.

TITLE OF INVENTION: WUCLEIC ACIDS AND PROTEINS OF A RAT GANGLIOSIDE

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

TITLE ALE REFERANCE: 8511-02

CURRENT APPLICATION WHERE: US/09/298,886

CURRENT FILING DATE: 1999-04-26

NUMBER OF SEQ ID NOS: 29

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 7

LENGTH: 1149

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LOCATION:
IDENTIFICATION METHOD: DNA sequencing and restriction analysis
IDENTIFICATION THE encoded product of nucleotide SEQ ID NO:
OTHER INFORMATION: 1: is the enzyme, GDP-L-fucose--D-galactoside 2-alpha-fucosy
OTHER INFORMATION: Which has the amino acid sequence described in SEQ. ID NO:1:.
OTHER INFORMATION: is responsible for the synthesis of 2'-fucosyllactose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        195
